What Does a Sexual Health Screen involve?

You will be seen by a doctor or one of our nurse specialists who will take:

- A urine sample - tested for Chlamydia and Gonorrhoea
- A blood sample - for H.I.V, Hepatitis B, Hepatitis C and Syphilis

Please note

Depending on your symptoms, you may have swabs taken.

Patients are advised not to pass urine for at least 2 hours before the screen in order to attain the optimal urine sample for testing.

If you are worried about a particular exposure, and you have NO symptoms, it is advised to leave 2 weeks before you are screened.

**** If you have ANY symptoms please make an urgent appointment or walk in during opening times****
