should be part of your regular health
checks.**

*This offer cannot be used in conjunction with
any other promotion and is valid until Oct 2010.*

Mole Mapping at Charter:

Charter Medical Group offers full body mole mapping or individual mole screening for any worrying moles or lesions.

Mole Mapping involves the examination and screening of any suspicious moles or lesions through digital imaging them to access their specific structural features.

The most effect way of combating malignant melanoma is by diagnosing it at an early stage of its development. The key to early detection is to monitor moles for any changes in shape, size or colour; mole mapping provides a baseline reference for tracking moles by documenting the entire surface of a patient's skin photographically.

If you have had exposure to the sun or use tanning salons, you should consider skin health assessments as part of your regular health checks.
